

Construction Safety

Safety management expertise is an integral component of ensuring construction projects and operations of all sizes are completed on time and under budget. CMI works with our clients to develop programs and processes designed to reduce injuries and fatalities as well as improve efficiencies caused by poor planning and oversight. Our services include:

- Safety program development
- Safety meetings/toolbox talks
- 10- and 30-hour OSHA construction training
- Hazard evaluation and risk management programs
- Industrial hygiene services (asbestos, lead, noise, etc.)
- Site safety orientation
- Onsite oversight/inspections
- Superintendent/foreman training program
- Accident investigations and litigation support
- Phase I/II site support
- Contractor safety program audits
- H&S programs required for ISNetworld® approval

CMI is the sole source provider of safety and health services to the Commonwealth of Pennsylvania's 80,000+ employees across 2,400 sites. The goal of this assignment is to assess and control work related injuries and illnesses. CMI provides services to the riskiest agencies including PennDOT, Conservation and Natural Resources, Corrections, Public Welfare, Military and Veterans Affairs, and Liquor Control.

CMI was selected to assist in the management of all safety and risk management programs for the entire City of Philadelphia. Working under the Department of Safety and Loss Prevention, CMI provides full-time onsite safety and industrial hygiene support in numerous areas including construction, building maintenance, fleet safety, and operations.

CMI was selected, through a competitive bid process, to provide ongoing safety, health, and environmental program development and training services to the PA Turnpike Commission. The contract involves conducting hazard assessments and gathering information for the development of compliance programs such as confined space, fall prevention, bloodborne pathogens, lockout/tagout, and hearing conservation.
