## Geo-Environmental Services

CMI's Geo-Environmental team includes licensed, professional geologists capable of servicing your organization's needs. Our services include:

- **Site Characterization/Remedial Investigation** — These intrusive investigations involve the collection of soil and/or groundwater samples to identify areas of concern.
- **Brownfields (Act 2 or ISRA)** — Brownfield restoration provides a mechanism for restoring abandoned or underutilized industrial and commercial properties, while at the same time preserving open space.
- **Soil & Groundwater Remediation** — Including designing, installing, operating and maintaining vapor extraction, groundwater pump and treat, dual-phase extraction, air sparging and oxygen injection systems.
- **UST & AST Removal** — Licensed tank removal contractors and licensed professional geologists will ensure that critical information is obtained at the time of the tank closure.
- **Phase I & II Environmental Site Assessment (ESA)**
  - Phase I ESA** involves an evaluation of past and present uses of a property, through research of government databases, historical sources and interviews of those familiar with the site, to determine the potential for the uses to adversely impact the site in accordance with the ASTM and All Appropriate Inquiry scopes of work. A Phase I investigation does not involve intrusive investigation of a site.
  - Phase II ESA** as defined by American Society of Testing and Materials ASTM designation E1903 is conducted to evaluate the recognized environmental conditions identified in the Phase I ESA.
